3.1.1 Download for Android App

Please use the following link or scan the barcode to download and install the APP on your mobile phone

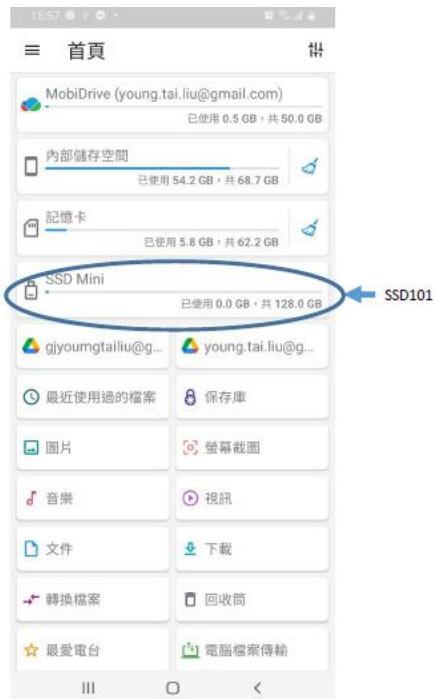

https://play.google.com/store/apps/details?id=com.mobisystems.fileman&referrer=utm_source%3Dpowermall

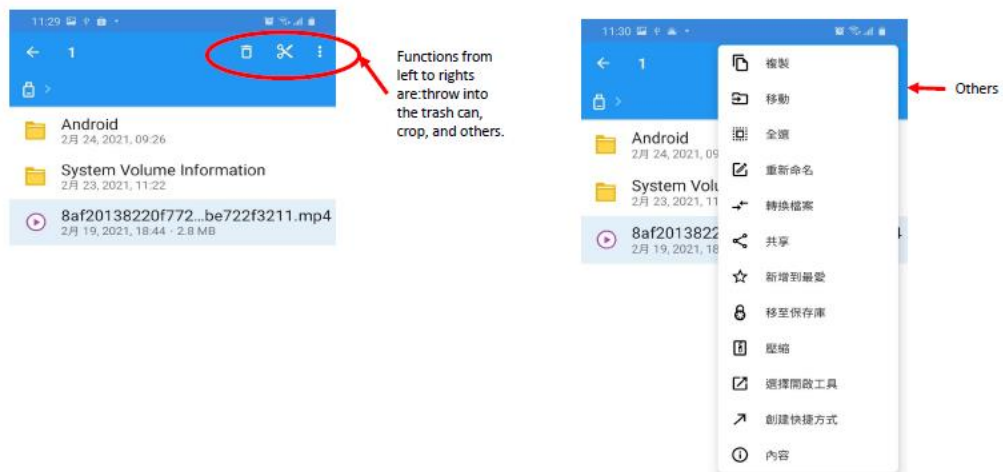

After the App is installed, the following APP icon will be generated in your phone

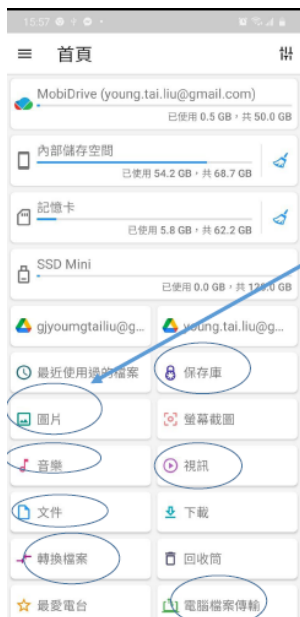

After the PSX1 hardware device is inserted into the phone, click the APP icon to open the program. After the program detects the PSX1 external solid state drive, the following screen will appear:

3.1.2 Android App directly entering functions for PSX1

3.1.3 Android App front home page functions related to PSX1

Front page related functions, such as pictures, will only show files and functions related to it after clicking.

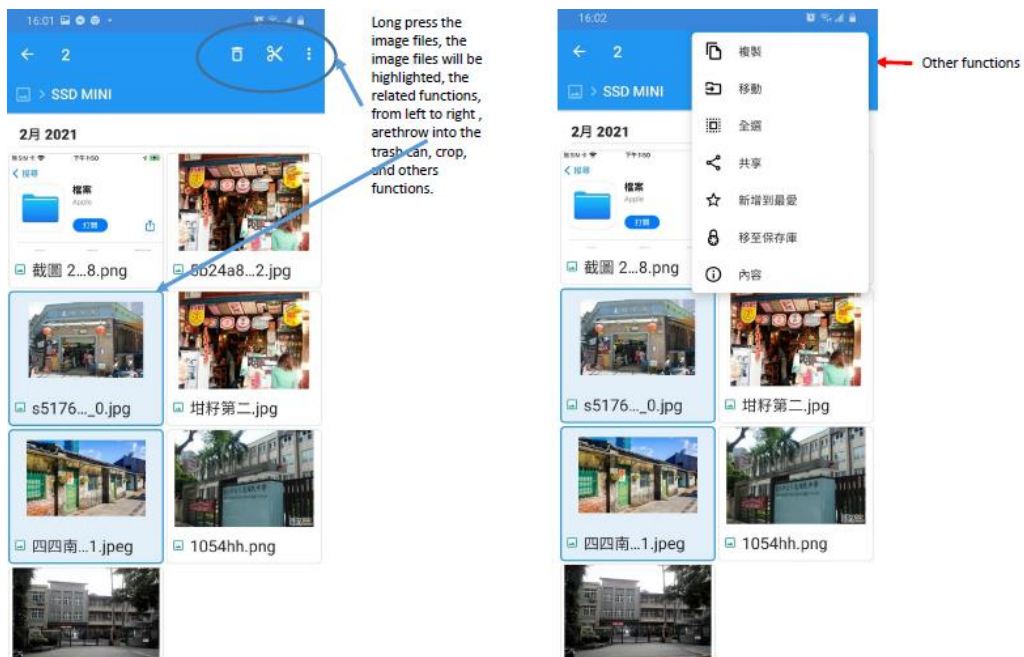

Click into picture function, it will show how many pictures there are, in the relevant storage space.

Click into the storage space, all pictures will be presented by reduced pattern.

Click on a single picture to zoom in and display it on the phone screen.

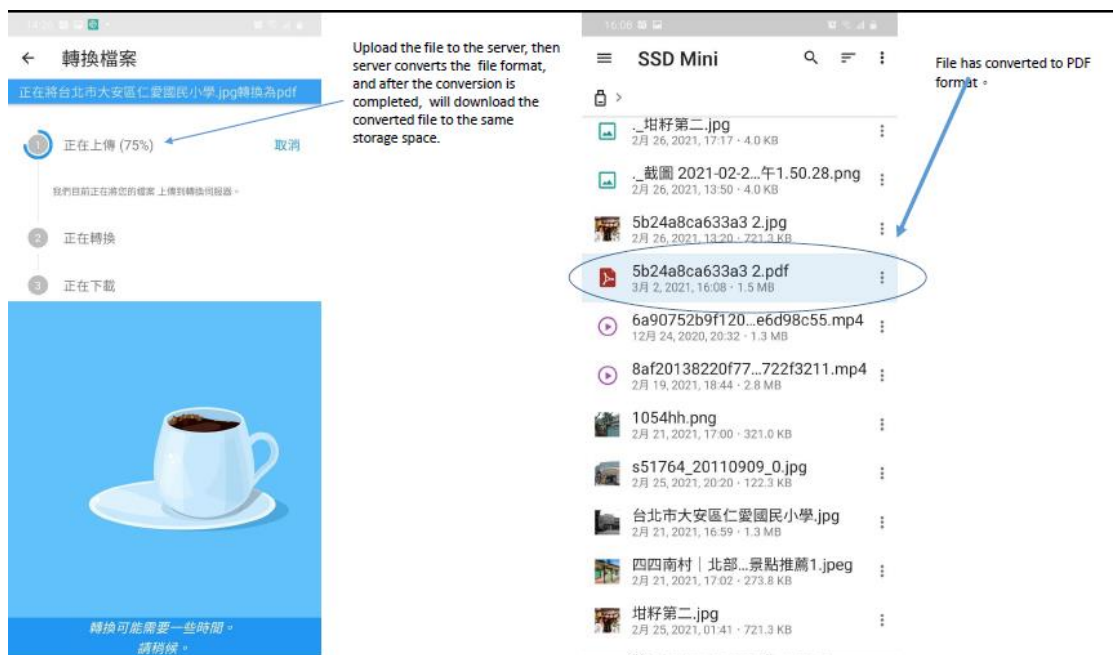

The operation methods of APP functions such as music, video, files, etc., are just like picture operations, so no detailed description.

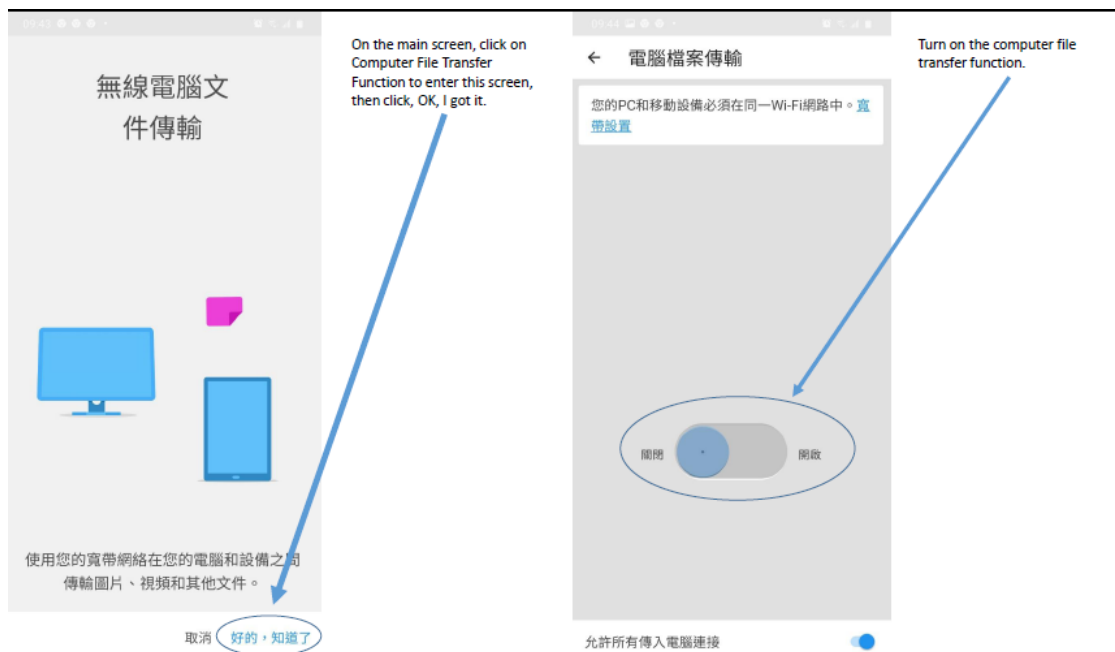

3.1.4 Android App front page special functions for PSX1

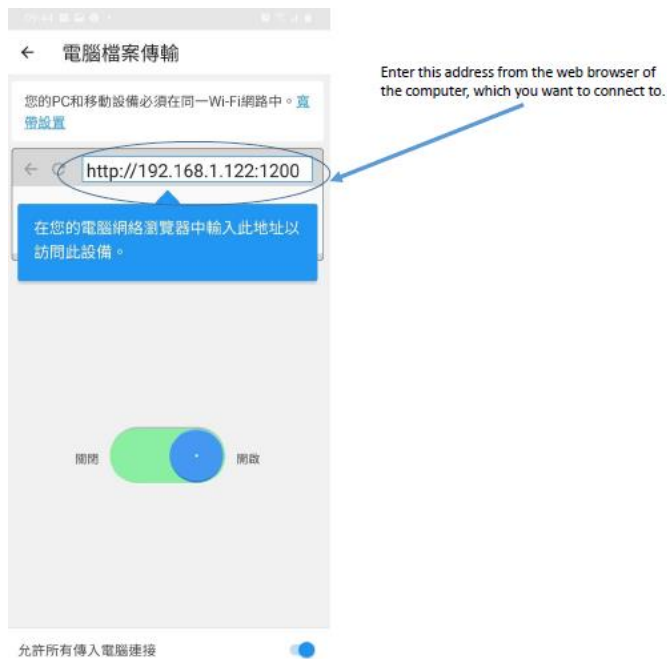

3.1.4.1 File format convert

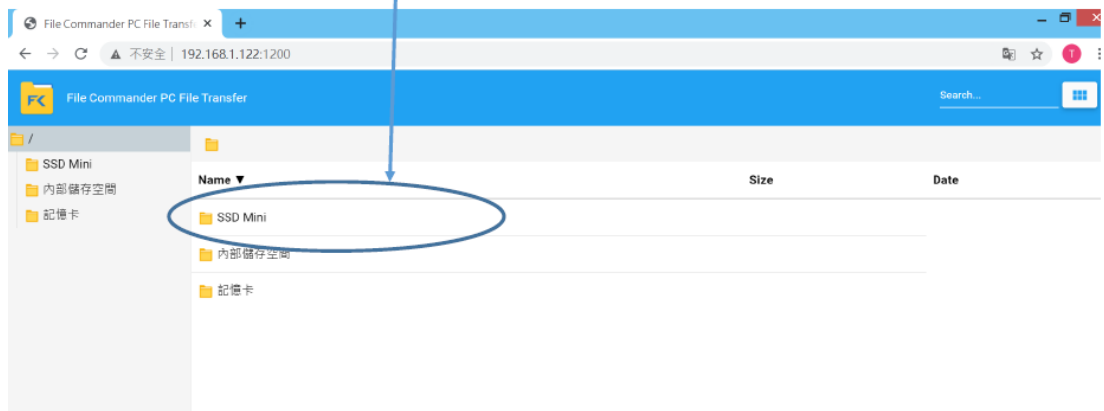

3.1.4.2 File transfer to your computer

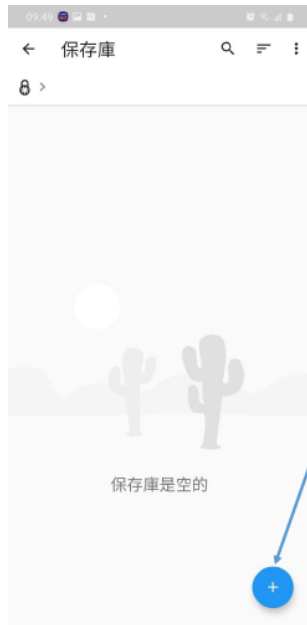

After the computer is connected, you can see the storage space of the mobile phone connected, this is the name of SSD101 external solid state drive.

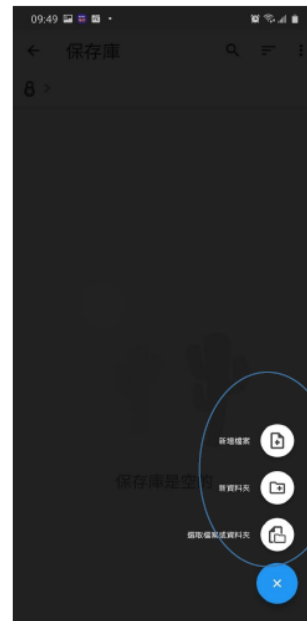

3.1.4.3 Safety

Safety only can be built on the phone memory or SD card, it cannot be built on the PSX1 external solid state drive. To enter the safety, a four-digit (0-9) PIN code (created by the user) is required.

The safety is initially empty, you can press the + sign to start the operation.

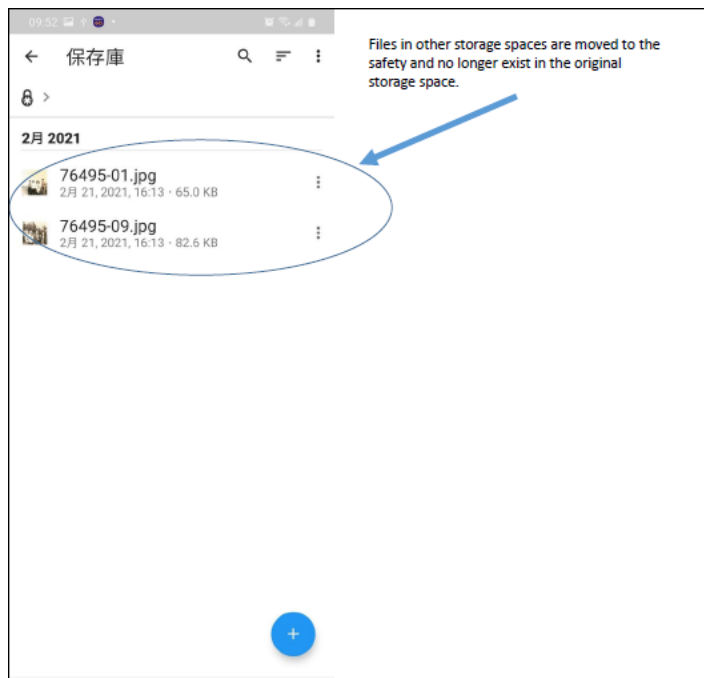

You can add files in this storage space. Add a new folder, or select a file or folder in another storage space, and move it to the safety for storage.

If you click to select a file or folder, the APP will ask you to select a file or folder from other storage space, such as this storage space.

The selected file or folder will be highlighted, then press Move to save to the safety to complete the moving.

3.2 iPhone App – File App

The file app of IOS 13, can directly read files on the USB flash drive or hard disk. If your iPhone IOS is not version 13 (inclusive) or higher, please update the IOS first. If your IOS is already version 13, but there is no file app, please go to the Apple Store to download and install the file app.

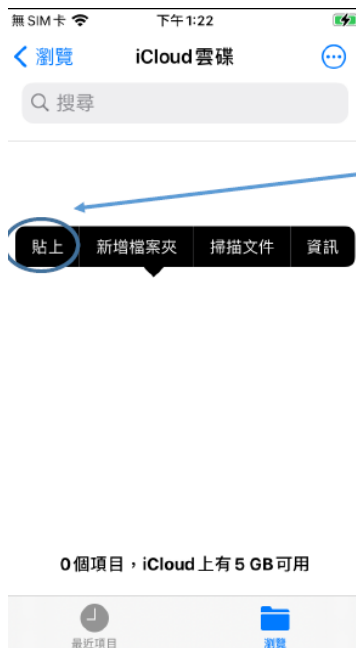

The files in the storage space of SSD101 are displayed as thumbnails.

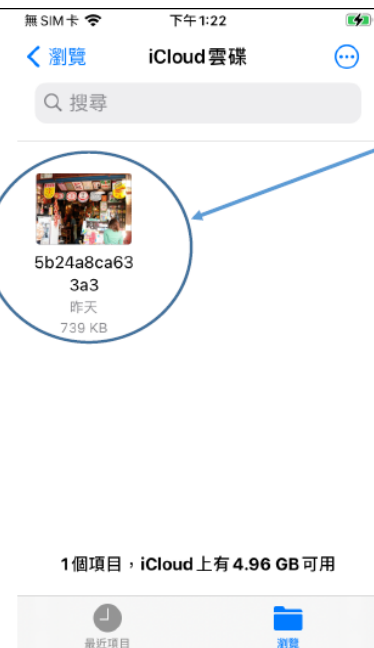

Long press a single file to display related functions.

Press copy function.

On the browse screen, tap "Enter iCloud Drive", enter iCloud Drive storage space, long press the blank screen, the related function appears, select "Paste".

The original copy of the file, has pasted in this storage space.

Copy function is to copy files to other storage space. Duplicate function is to duplicate files directly to this storage space. Move is to move files to other storage space. The difference from copy function is that the moved files are no longer exists in its originally storage space; and the delete function is to delete the file directly.

Press and hold a single file to display the related functions, then select the information function to display the file information content.

Long press on a single file to display related functions, and select Quick View. Since this file is a graphic file, the content of the graphic file is displayed.

Long press on a single file, when the related functions are displayed, select the mark function to mark this file in red.

After marking, the file name will show with a red icon.

Long press on a single file to display related functions, select rename function, and give the file a new name.

Long press on a single file to display related functions, select share function, then select mail in sharing, and share it by sending mail.
